# Hilite

Sustainable herbicide solutions  
with total droplet control

**nomix  
enviro**  
enhancing environments

## Why should I use Hilite?

### Versatile, safe and effective solution to total weed control

- the most technically advanced glyphosate formulation

### Saves you time and money

- ready to use pack connects directly to the applicator, eliminating the time consuming and hazardous task of mixing and measuring

### Safer for the environment

- biodegrades into naturally occurring compounds in the soil

### Safer for operators, bystanders, wildlife and pets

- non-irritant

### Rain-fast within 30-60 minutes of application

- oil-emulsion formulation is quickly absorbed by the leaves

### Spray closer to obstacles

- virtually no spray drift, droplet bounce or run-off

### Accurate application means less wastage

- precise, uniform droplets.

## Where can I use Hilite?

Hilite effectively controls annual and perennial grasses and non-woody broad-leaved weeds in amenity and industrial areas, parks, highways, paved areas and factory sites. Hilite is also effective for clearing vegetation prior to planting of ornamental species, around the bases of trees, shrubs and roses, as well as in forestry areas.

Industrial

Landscaped areas

Hard surfaces

Tree bases

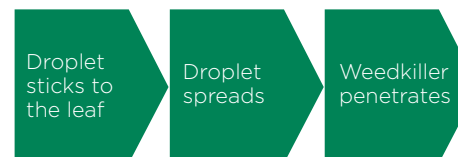

Parks

## How does Hilite work?

Hilite is a technically advanced oil-based total droplet control glyphosate formulation. Once applied, it is quickly and easily absorbed by the leaves. It then travels throughout the weed to its root system, ensuring effective control.

The oil quickly cuts through the weed's protective cuticle, giving more opportunity for the glyphosate to penetrate into the weed, giving effective control whilst reducing environmental impact.

## How do I apply Hilite?

Hilite is a low volume herbicide for use with the Nomix Total Droplet Control range of applicators. Simply shake the pre-mixed, ready to use pack, connect it straight to the Nomix Total Droplet Control applicator and start spraying. The white pigment in Hilite ensures accurate spraying, whilst the stable oil-emulsion formulation helps ensure accurate application.

Established annuals, deep-rooted perennials and broad-leaved weeds

10 litres/ha

Light vegetation and small annual weeds

7.5 litres/ha
